ValueNet Works™

Modeled on Verna Allee's HoloMapping™ methodology, ValueNet Works™ is an online application that can be used to create business webs. These business webs, or value exchange networks, are based on the value creation processes that occur between participants in a system.

Deliverable:

Business webs that identify optimized and unoptimized flows within an organization's customer and supplier networks.

Use ValueNet Works™ to identify:

- key participants and stakeholders;
- key deliverables in the system;
- inputs and outputs for each participant;
- key transactions and processes;
- sequences of events; and
- feedback loops.

ValueNet Works™ Features:

- multiple viewing options
- permits collaboration with other specific users in the system
- links performance metrics to real business activities
- show inputs and deliverables for every participant
- defines both tangible and intangible value creating activities
- completes a cost/benefit analysis for key business transactions
- develops custom tangible and intangible scorecards
- freezes frame and print diagrams
- prints analysis tables
